

Online MEMBRANES Seminar with Prof. Susan K. Fried

Thursday, September 24th, 2020 | 14:30-15:15 | Online via Zoom

By Susan K. Fried

Professor, Director, Translational Adipose Biology and Obesity
Diabetes, Obesity, and Metabolism Institute
Icahn School of Medicine at Mount Sinai, NY, USA

Mechanisms of adipose tissue expansion and links to metabolic health

Abstract:

The term 'adipose expansion' is now often used to mean 'hyperplasia', i.e. an increase in 'healthy' fat storage capacity by increasing the number of adipocytes. Hypertrophy of adipocytes is thought to 'inevitably' lead to the metabolic complications of obesity. However, depot, sex and species differences in these processes show that these relationships are more complex. New insights into the underlying mechanisms of adipose expansion and implications for adipocyte function will be discussed.
